🧠 SKILLS

HTML, CSS, JAVASCRIPT
Tool : Visual Studio Code

Java
Basic Java and DB Connectivity
Tool : Netbeans IDE & Visual Studio Code

PHP

Python

MYSQL

UI & UX Design

📂 PROJECTS

FIMIS - First Year Internal Mark Information System
I developed FIMIS (First Year Mark Information System), a web application designed for managing student exam results. FIMIS features three user roles: Admin, Staff, and Student. Students can securely access their results using registration numbers and date of birth. Staff members authenticate via email to input student marks for specific subjects. Admin capabilities include user and data management, permission setting for staff to edit marks, and generating consolidated reports.

Library Management System
Designed and developed a Library Management System application using Microsoft Visual Basic, incorporating database management and user interface design to streamline library operations efficiently.

Car retail Application
Created wireframes and prototypes for a Car Retail Website using Figma, featuring advanced functionalities like brand-specific car search, detailed car descriptions, and seamless order placement and payment integration to enhance user experience and operational efficiency.

📜 CERTIFICATES

Web Development - CodSoft.
One month internship in Online mode.

MS Office - TN - Naan Mudhalvan
(Online)
